

VIRTUAL TRAINING

WEB23 - State-of-the-Art+ Data Analytics in Risk, Control and Audit (Artificial Intelligence)

3 June 2021

OVERVIEW

This program is part of the Applied Data Analytics in Risk, Control and Audit™ series created and delivered by MBS Academy. The program covers state-of-the-art concepts of Data Analytics, such as Artificial Intelligence/Machine Learning, types and approaches in Machine Learning and specific Machine Learning use cases in audit/risk, that Audit and Risk professionals and teams can apply in their everyday work.

During the program participants will learn what is Machine Learning (ML) and its types: supervised and unsupervised learning. We will also look at various ML approaches, such as neural networks, decision trees, clustering and anomaly detection. Specific module is dedicated to creating ML models by non-technical professionals, such as audit and risk professionals. Participants will perform exercises, with publicly available tools, to apply ML in cybersecurity and project risk scenarios.

The program contains a significant element of gamification and practical work. Every 15-20 mins there is a gamified activity, designed to reinforce the concepts that have been covered and improve retention after completion.

The last part of the program includes exercises on how to apply Machine Learning to identify network intrusion attempts and classify project risk at project's start. All datasets and step-by-step instructions will be provided at the beginning of the program. Participants will be allowed to keep these and use them as a blueprint for real-life reviews they may be performing.

LEARNING OUTCOMES

After the completion of this program participants will be able to:

- Understand what Machine Learning is and how it can be used in an organisation
- Appreciate the types and approaches in Machine Learning and select the most appropriate one in a given situation
- Create a Machine Learning model to be used for a specific task
- Create the necessary datasets to use in Machine Learning (ML) and train and test ML solutions
